BRMS reported a 2Q26 net loss of US$4.8m (-152.8% yoy; -124.5% qoq) amid the Poboya pushback, domestic gold oversupply, and softening gold prices. The pushback was resolved with open pit mining resuming in 2H26, and the ANTM contract secured through Jun 28. Long-term volume growth remains intact, supported by CIL plant expansion to 2,000 tpd by 4Q26 and commencement of the Poboya underground mine from 1H27 to achieve its 200,000 oz target by 2029. Maintain BUY. Target price: Rp1,040.

Company Description

Bumi Resources Minerals is an Indonesian mining company focused on the exploration and development of mineral assets, including copper, gold, zinc and lead.

- **Three factors affecting 2Q26 results.** Bumi Resources Minerals’ (BRMS) 2Q26 financial and production results were affected by three factors, though each carries an offsetting factor: a) temporary lower output resulting from the anticipated pushback operations at Poboya's River Reef mine site, a planned part of mine sequencing that had already been publicly disclosed through three separate press releases on 30 Jul 25, 29 Oct 25, and 16 Mar 26, and which has since been finalised, allowing BRMS to resume open pit mining activity in 2H26 with gold output expected to increase accordingly; b) BRMS faced challenges selling its gold output in 2Q26 due to oversupply in Indonesia, as many exporters shifted to selling domestically, prompting domestic buyers to demand discounted prices and resulting in only around 70% of BRMS' gold output being sold during the quarter, BRMS secured a contract with Aneka Tambang (ANTM) in late-Jun 26 to sell most of its gold output at competitive prices on a monthly basis through Jun 28; and c) the average gold commodity selling price declined 8.3% qoq from US$4,512 in 1Q26 to US$4,138 in 2Q26.
- **Long-term volume growth remained intact.** BRMS is upgrading its first carbon-in-leach (CIL) plant from 500 tpd to 2,000 tpd with full completion targeted for 4Q26. Poboya underground development is on track, supporting higher gold grade. The underground development at Poboya, operated by Macmahon Holdings’ Indonesian unit, is progressing steadily and remains on track to commence production by 1H27. Initial mining zones are expected to span 80-300 sqm, with some ores from the underground mine area projected to start contributing to production in late-26/early-27 (at a grade of around 2 grams/t (g/t)), above the current 1.3-1.5 g/t. BRMS is finalising its paste fill plant, which will be used to stabilise mined-out areas and support underground operations. Ventilation infrastructure (shaft sink) is also currently under development to regulate airflow. BRMS’ targets are: 70,000-75,000 oz in 2026, 80,000 oz in 2027, 150,000 oz in 2028, and over 200,000 oz in 2029.

Earnings Revision/Risk

- **We cut our 2026-27 earnings forecasts by 37.4%/41.2% respectively,** mainly reflecting lower gold price assumptions.

Valuation/Recommendation

- **Maintain BUY with a lower target price of Rp1,040 (from Rp1,330) based on 2027 EV/EBITDA of 27x.** We cut our target price mainly due to lower 2026 earnings estimates and a more cautious gold price outlook amid rising global bond yields and a hawkish monetary policy stance. Nevertheless, we remain positive on BRMS, supported by the upcoming CIL plant expansion and the commencement of higher-grade underground ore production from mid-27. Additional upside could come from potential copper reserve upgrades, underpinned by BRMS’ extensive drilling programme planned for 2026.

Share Price Catalyst

- Copper reserves poised for a major upgrade, from massive drilling activity in 2026.
- Robust long-term production growth (35% CAGR, 2026-31).
